

Dear Hiring Manager,

I am a DevOps Engineer with over five years of experience designing scalable infrastructure, improving developer workflows, and driving cross functional initiatives across multiple organizations. I am seeking a senior or leadership role where I can combine deep technical expertise with a focus on guiding teams and delivering high impact solutions.

In my current role supporting Apple TV, I work closely with internal and external stakeholders to define requirements and design systems that support large scale operations. This includes building Kubernetes hosted applications and architecting AWS workflows that process and validate high volumes of data using services such as Lambda, S3, SQS, and SNS. I have also developed Python based internal tools that improve team throughput and reduce operational friction, allowing teams to focus on higher value work.

Throughout my career, I have taken on increasingly complex challenges. At Trapp Technology, I designed and implemented an on premise Kubernetes environment to support containerized workloads. At Neustar, I improved CI and CD pipelines and developed reusable Terraform modules to increase scalability and consistency across environments. I have consistently contributed production level code in Go and Python while also improving the systems that support development at scale.

In addition to my technical work, I bring experience leading and supporting teams. I have supervised a small team in a previous role, where I was responsible for coordination, mentorship, and maintaining accountability across day to day operations. This experience strengthened my ability to communicate clearly, make decisions, and balance hands-on execution with delegation when appropriate.

I am particularly interested in opportunities where I can help set technical direction, mentor engineers, and build systems that have a meaningful impact on both the business and the teams that support it. I would welcome the opportunity to discuss how my experience aligns with your organization's goals.

I can be reached at (209) 534-1837 or tj@brackett.dev. Professional references are available upon request.

Thank you for your time and I look forward to speaking with you more about this opportunity.

Sincerely,
TJ Brackett
