

TJ Brackett

DevOps Engineer

As a self-sufficient self-starter with a strong passion for technology and automation, I bring a versatile skill set that seamlessly integrates into any team. With a proactive approach and a deep understanding of DevOps and Software Engineering principles, I consistently drive efficiency and innovation in fast-paced environments. I have over two years of experience working with AI models to produce production-ready code and infrastructure with a focus on security, stability, and scalability.

WORK EXPERIENCE

DevOps Engineer TEKsystems at Apple TV

09/2023 - Present

Remote

Achievements/Tasks

- Create complex and intuitive Python GUI applications to assist other teams with various tasks to improvement their throughput.
- Utilize Kubernetes to both host numerous web applications that I had created using React, Flask, and PostgreSQL and perform long term large-scale compute tasks.
- Setup complex workflows within AWS using Lambda, S3, SQS, SNS, and SES to validate and move large volumes of data as well as keep records, automatically email responsible parties of any errors, and populate custom dashboards.
- Use Claude Code to improve current codebases and infrastructure as well as embedding AI agents directly into standalone apps.
- Gather specs from internal and external teams to build out the systems needed to support their business needs.

DevOps Engineer Neustar, Inc.

09/2022 - 03/2023

Remote

Neustar, Inc offers real-time analytics, fraud validation, and marketing information for the top telecommunication companies in the country.

Achievements/Tasks

- Created, modified, and optimized Jenkinsfiles to streamline CI/CD processes.
- Enhanced and optimized existing Ansible roles to improve efficiency and flexibility and added additional functionality.
- Created reusable Terraform modules and templates to promote scalability and maintainability.
- Deployed and managed Docker-based workflows for microservice architecture.

DevOps Technician Trapp Technology

09/2020 - 09/2022

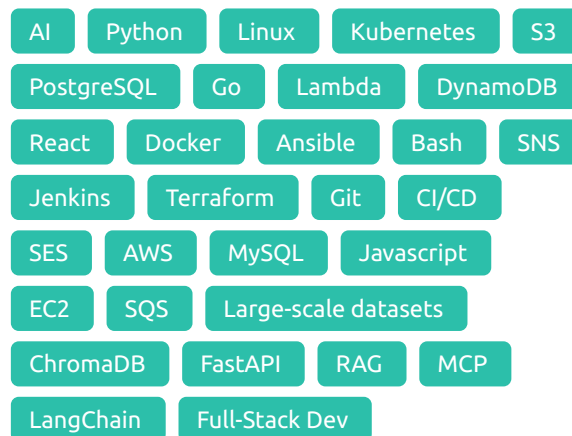

Remote

Trapp Technology provides Managed Services, Cloud Hosting, and IT Security Services.

Achievements/Tasks

- Created Ansible playbooks and Bash scripts to automate tasks such as setting up configs for new Linux servers.
- Created and modified complex Go and Python code bases running production code.
- Designed and implemented Kubernetes on-prem using Kubeadm, Calico, and Metallb to host custom Docker containers on the company's on-premise cloud.
- Created CI/CD pipelines using Jenkins and Github Actions to automate deployments.

SKILLS

PERSONAL PROJECTS

Indie Game Development

- Building scalable microservice based backends in Golang with a focus on security and performance for multiplayer environments.
- Create intuitive interactive clients using Pygame and Unity C#.
- Design and maintain complex code interactions to make unique and engaging content while leaving the codebase flexible enough to support new systems and features for future enhancements.

Home Network Command Center

- Setup a Python script on a Raspberry Pi to intercept incoming network traffic to warn of any potentially malicious data and to perform basic monitoring of all connected.
- Perform tasks such as stopping traffic from certain sites to target devices or preventing all network traffic to target devices for a set amount of time through simple commands to a Discord bot.

AI Automation Toolkit

- Create multiple custom agents to perform specialized tasks under an orchestrator to carry out tasks automatically. Starts with an in-depth spec interview to prevent assumption for requirements on every aspect of the project.
- RAG system, ChromaDB, MCP server, LangGraph, FastAPI, and LangSmith are being used in this project to perform create extensive codebases autonomously.

EDUCATION

Bachelor of Science in Computer Science

California State University, Stanislaus
